

ALUMINUM RAILING ROCK CLAD PILLAR INSTALLATIONS

One of the problems with installing aluminum railing on homes with rock clad pillars and walls is how to secure the rail. Most installers will just use posts, which increases the cost, and looks tacky.

At Creative Deckworx we go the extra mile. We will provide you with a rail end with mounting brackets that can be installed prior to the rock cladding. When the cladding is complete, we replace this temporary rail end with the real thing.

The end result is the rail looks like it is coming straight out from inside the pillar, very classy.

Wall Brackets Installed Prior to Rock

Aesthetically Pleasing and Functional
