

**ALUMINUM RAILING  
GLASS RAILING SYSTEM  
LASER ETCHED TEMPERED GLASS**

Take your deck to the next level with something truly unique - laser etched tempered glass panels.

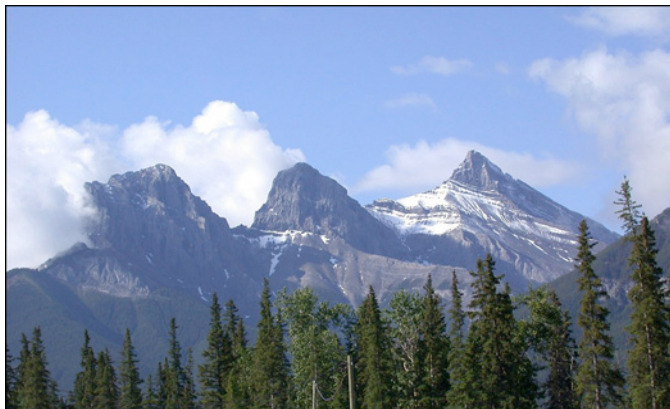

Using the same technology as LASIK laser eye surgery, these lasers can cut to an incredible resolution, reproducing the original image in stunning detail, not achievable through any other means.

This definitely blows sandblasting away...

We can take almost any picture - mountain scenery, family portrait, lost loved ones, graphic designs, and laser etch it full scale into your glass panels for your deck railing.

Use a tinted etched panel for privacy, or a clear etched panel so you can display your picture, with a clear view through to the yard.

The first sample is from a photo of the Three Sisters Mountain Peaks at Canmore Alberta, etched into a 55 inch tinted tempered panel.

**Three Sisters Mountain Peaks Original**

**Three Sisters Mountain Peaks Laser Etch**

This piece was originally done for someone who had a vacation property at Canmore, but was installing a deck at their home near Edmonton. That way, they could sit on their deck in the morning and have the picture of the Three Sisters Mountain Peaks to enjoy with their coffee.

Your choices in tempered glass are clear or tinted (bronze/copper or grey.)

... continued

The second sample picture shown originates from a 30 year old nicotine covered picture, scanned and cleaned up and etched into a 55 inch clear tempered panel.

**Three Sisters Mountain Peaks Original**

**Three Sisters Mountain Peaks Laser Etch**

Whether your tastes are abstract artwork, mountain scenery from your favourite vacation spot, or family photos, we can etch it with incredible resolution and clarity.

Your deck will be simply stunning and unique, available from no one else, but Creative Deckworx !

### **How to do it . . .**

You can send us your photo for us to scan, or email us your picture, and we will analyze it for suitability for laser etching. The higher the resolution, the better. We prefer 300 dpi (dots per inch) in any standard graphics format (jpg, bmp, tiff, gif, etc.) If your email program wishes to reduce the size of the picture you are sending, choose to keep the original size.

What you want to pay attention to is something that has a high contrast between the object you wish to stand out, and the background.

Should you have any other questions or concerns, please do not hesitate to contact us at your earliest convenience.
