

PRODUCT LISTING VINYL MEMBRANES - 2009

CREATIVE DECKWORX

Engineered Floor Covering

Our vinyl flooring is an **engineered** floor covering for exterior use as waterproofing membranes and is manufactured from state-of-the-art virgin PVC compounds, antifungal agents, U.V. inhibitors and fire inhibitors. Our vinyl floorings come with a factory-applied anti-soiling acrylic top coating, designed for easy cleaning and maintenance, and are warranted to stand up to the harshest Northern environments.

Tested Slip Resistance

These vinyl flooring products are embossed to provide a positive slip-resistant walking surface, without being abrasive like some non-slip surfaces and has the right amount of emboss to provide a comfortable, yet easy to clean surface.

The Long Term Waterproofing Solution

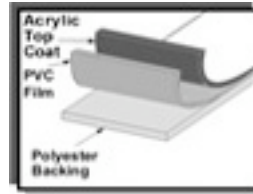

Our vinyl flooring system provides for a proven long-term waterproofing solution to new or existing sundecks. It may be installed in any area where slip-resistance, durability and ease of maintenance are of primary concern. Because our vinyl flooring completely encapsulates the deck area, it eliminates common deck problems such as rotting, warping, or cracking, commonly associated with wood decks.
